

## HW 1 AC 324

Start working on your final project by creating 3 web pages with the following elements

(Remember to fill in content specific to the website subject you wish to design):

1. Heading tag
2. Paragraph tag
3. Bold or Italic
4. Horizontal rule
5. Unordered nested list
6. Ordered nested list
7. Table
8. Absolute link
9. Relative link
10. Images with proper alt tag
11. Background color
12. Form: with proper placeholder, label
  - a. Text element
  - b. Radio button
  - c. Check box
  - d. Submit button
  - e. Reset button
  - f. Text area
  - g. Drop-down list

### Deliverables:

The source HTML files and any other files (images, linked pages) I need to run your design in a zipped folder.

I should be able to click any HTML file, open the website in my browser, and see your design fully. If any dependencies are missing, you will lose points. Please learn how to link internal HTML files so you can just link to all three and I can check them more quickly.

(Hint: the path must be relative, not absolute) Here is a resource
